DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/8/2005 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 1-15 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Longacre, Jr. et al. (U.S. Patent No. 6,264,105).

Regarding claims 1 and 7, Longacre discloses:

- an image sensor (Fig. 2: image sensor 32);
- an illumination module 20 coupled to the image sensor 20, the illumination module comprising a plurality of reflectors 24 that reflects light of a light source 22 (Fig. 2), and collectively generate a uniform illumination pattern for illuminating a target data area (i.e., a target object T) (col. 2, lines 62-66), wherein there is a distinct light source element per reflector (Fig. 2: each LED 22 per reflector 24).

Although Longacre does not explicitly teach the reflectors for also providing visual aiming assistance, he/she teaches an aimer 23 for providing visual aiming assistance (Fig. 2).

At the time of the invention, it would have been obvious to one of ordinary skill in the art to use the aimer 23 for providing visual aiming assistance.

The suggestion/motivation for doing so would have been that the aimer 23 is functional supplement to the reflectors 24 for performing the same function as the claimed reflectors.

Therefore, it would have been obvious to use the aimer 23 in addition to the reflectors 24 to obtain the invention as specified in claims 1 and 7.

Allowable Subject Matter

5. Claims 13-15 are allowed.
6. Claims 2-6 and 8-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claims 13, 14, and 15, the prior art, taken either singly or in combination, does not teach:

- wherein each illumination pattern generated by each reflector matches all other illumination patterns generated by all other reflectors.

Regarding claims 2, 4, 8, and 10, the prior art, taken either singly or in combination, does not teach:

- wherein a curvature and shape of the reflective surface is curved... illumination pattern.

Regarding claims 3, 5, 6, 9, 11, and 12, since these claims depend upon claims 2, 4, 8, and 10, respectively, they are also objected for the same reason.
